LEAD TEST KIT (ชุดทดสอบตะกั่ว)

Lead acetate paper

REF 907 44

The test paper allows the quick and easy detection of hydrogen sulfide. This gas occurs in the processing of raw oil. It is toxic even in low concentrations. Therefore, critical points are carefully checked. Sulfide containing solutions also give a positive reaction.

Lead acetate is toxic and the test paper needs to be declared as hazardous. The technically equivalent Sulfide test paper (REF 907 61, page 43) is a non-toxic and safe alternative.

Type: test paper
Limit of sensitivity: 1 drop of a solution containing 5 mg/L sulfide (S^{2-}) shows a positive reaction
Presentation: reel of 5 m length
Color change: white → brown-black

This test paper is also available as refill pack with 3 reels (REF 907 45) and as booklet with 100 strips (REF 907 46).
